6+ Years of experience
123+ Projects
232+ Technologies
16 Developers led

SUMMARY

Lead full-stack developer with **6+ years** of experience, building production web apps since **2020**. I joined UX MIND (https://ux-mind.pro), a design agency, in February **2024** and lead its development: I run the technical side of client projects from estimate to launch. I have led **16 developers** across my career, up to **4** at a time, and because the agency has no HR I also run hiring: **6 developers** hired so far. My stack is TypeScript, Next.js, React, Prisma, PostgreSQL and Tailwind CSS. I review code, build with Claude Code every day and talk to clients directly.

CORE SKILLS

Core stack	TypeScript, React, Next.js, Tailwind CSS, PostgreSQL, Docker
Languages & markup	JavaScript, HTML, CSS
Front end	Sass
State, forms & data fetching	Zustand, Redux Toolkit, TanStack Query, React Hook Form, Formik, Zod, Yup
APIs & back end	Node.js, oRPC, tRPC, GraphQL, OpenAPI, Express, NestJS
Data	MySQL, Prisma, Drizzle, Supabase, Convex, Firebase
Auth, payments, email	Better Auth, Clerk, NextAuth, Supabase Auth, Stripe, PayPal, Square
CMS & commerce	Sanity, Builder.io, Strapi, Storyblok, Shopify
Quality & tooling	Git, Playwright, Jest, Biome, ESLint
Infrastructure & observability	Vercel, AWS, Sentry, PostHog

All 232+ technologies: sergey-petrinich.vercel.app/stack

RECENT EXPERIENCE

Lead Full-Stack Developer · UX MIND

February 2024 – Present

UX MIND (https://ux-mind.pro) is a digital design agency. It builds SaaS products, admin dashboards and marketing sites for clients in Europe and the US.

- Led **10 developers** on client projects, up to **4** at a time: estimate every project, decide who takes which task, review code, coach, and act as the clients' technical contact.
- Run hiring and recruiting, because the agency has no HR: screen candidates, set the test tasks, interview and onboard. Hired **6 developers**.
- Led or built **33** client projects, from marketing sites to SaaS platforms and admin dashboards.
- Set the team's default stack (Next.js App Router, TypeScript, Prisma on PostgreSQL, Better Auth, oRPC, React Hook Form with Zod, Tailwind CSS) and the quality gates new projects start with (Biome, Husky, GitHub Actions, Vitest).
- Built client integrations with Stripe, Shopify, Sanity, Twilio, Resend, Mux, Leaflet, Upstash, Arcjet, Sentry, PostHog and the Vercel AI SDK with Gemini.
- Designed the studio's technical interview: a **90-minute** simulated workday where candidates work real tasks with Claude Code and AI-played teammates, and are graded on judgement instead of recall.

- Wrote `ux-mind-helpers`, a zero-dependency toolbox of 8 codemods and lint guards for the agency's projects (import aliases, Tailwind values, React Compiler checks, `.env` sync).
- Adopted Claude Code in 08.2025 and wrote the team's conventions for using it.

Freelance Full-Stack Developer · Freelance — April 2025 – Present

Self-employed client work next to UX MIND (https://ux-mind.pro): marketing sites and a streaming platform built end to end, plus fixes and hosting for existing sites.

- Built alba.swiss end to end: the first version in 04.2025 and the 09.2026 rebuild, a marketing site with 16 animated sections and a request-an-introduction form.
- Built and deployed the Department of Human Dynamics site, a marketing site for an AI research group with structured data for SEO (62 commits).
- Built a live-video streaming platform alone: adaptive HLS video, creator profiles with media feeds, English and Dutch with next-intl, a Sanity CMS, and Docker with Nginx on a VPS.
- Took over gdd.education: UI polish and bug fixes, a move from Vercel to a VPS, Docker builds, DNS and self-hosted Umami analytics.

Front-End Developer · Ceviant — December 2022 – November 2023

Cloud treasury management product that helps companies aggregate their cash management tools on one platform.

- Introduced a new folder structure and one shared way of building features, which made onboarding new people easier.
- Led 4 developers on the app's front end, one of them an intern I mentored.
- Led development and maintenance of the app's key features, its refactoring and regular code reviews.

Front-End Developer · Tapston — Autumn 2022 – December 2023

Software outstaffing company. I joined in autumn 2022, worked on an internal project first, then was placed full-time on Ceviant (https://app.ceviant.co).

- Led 2 developers on the internal project before the Ceviant (https://app.ceviant.co) placement.
- Designed the project's architecture, built the landing page and a UI kit shared across the product, and developed product features.

Self-taught Front-End Developer · Portfolio — September 2020 – November 2022

43 responsive personal projects, from landing pages to full-stack sites, built while studying marketing.

- Taught myself HTML, CSS, JavaScript, React, TypeScript and Next.js, and shipped every project with one new technology or animation technique.

SELECTED PROJECTS

2026 **OhBirdie!** — Lead dev

ohbirdie.com

`Next.js` `oRPC` `Prisma` `Better Auth` `Docker` `TypeScript` `Tailwind CSS` `PostgreSQL`

2026 **NoaSpot API** — Sole

`AI-orchestrated` `Hono` `Prisma` `Better Auth` `Gemini API` `Docker` `TypeScript` `PostgreSQL`

EDUCATION

School of Business and Management Technology of Belarusian State University (SBMT BSU) — 2018 – 2022 · Minsk, Belarus

Bachelor of Marketing

LANGUAGES

English (C1) **Russian** (Native)

INTERESTS

Dungeon Master for 500+ Dungeons & Dragons games since 2021: planning, improvising and keeping a group on one goal. I also play guitar.
